

Stop Stripping Today

Covalent Bonding

Single Component

Anti Graffiti

Extreme Hardness

UV Stable

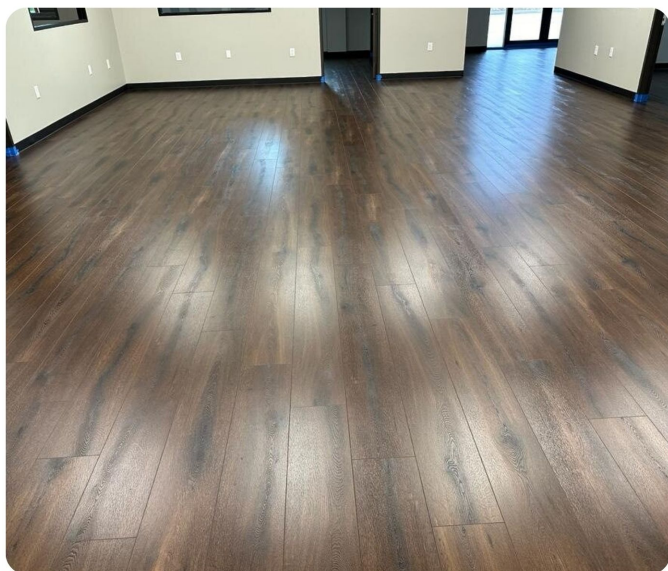

Spray Applied

Coval Vinyl is a thin-film, single component coating designed to protect vinyl flooring from surface wear, stains, and chemicals. It creates a covalent bond with the substrate and is easily and quickly applied with an acetone pump sprayer. Coval Vinyl is used over any VCT, LVT, LVP, or other laminate flooring substrates to reduce maintenance costs and save time and money.

Coval Vinyl is easy to clean, eliminating the need for continued use of strippers, waxes, and harsh cleaning detergents and its disposal. It provides a sustainable, environmentally friendly alternative to traditional vinyl floor maintenance. Available in Gloss and Matte.

Coval coatings contain less than 100 g/L VOCs and exceed SCAQMD Rule 1113 requirements for air quality; as well as contain no known carcinogens under Proposition 65, California's Drinking Water and Toxic Enforcement Act of 1986.

Coval Vinyl is the solution to stop stripping and waxing vinyl floors forever.

For more information visit us at www.covaltechnologies.com or call +1-281-566-4277.

VCT: Coval Vinyl revitalizes vinyl composite tile, adding a durable, UV stable layer of protection to protect from scuffing, scratches, and stains. Use **Coval Vinyl Primer** before Coval Vinyl to increase the shine and durability of the coating.

LVT/LVP: LVT and LVP have a factory finish with limited properties and in most cases, it will scuff and stain eventually. Apply Coval Vinyl over the existing factory finish to restore and protect it to like-new condition.

Other Laminate Floors: Coval Vinyl restores the appearance and increases the life cycle of wood and vinyl laminates.

Achieve ultimate protection on nearly any substrate with these related products.
